Versión TITAN para Sulfúrico 98%, dens.1,84

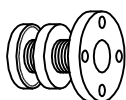

Tubo Sonda

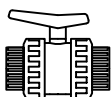

Rácords

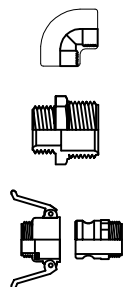

..con Brida

Válvulas

Empalmes

Sensor Nivel

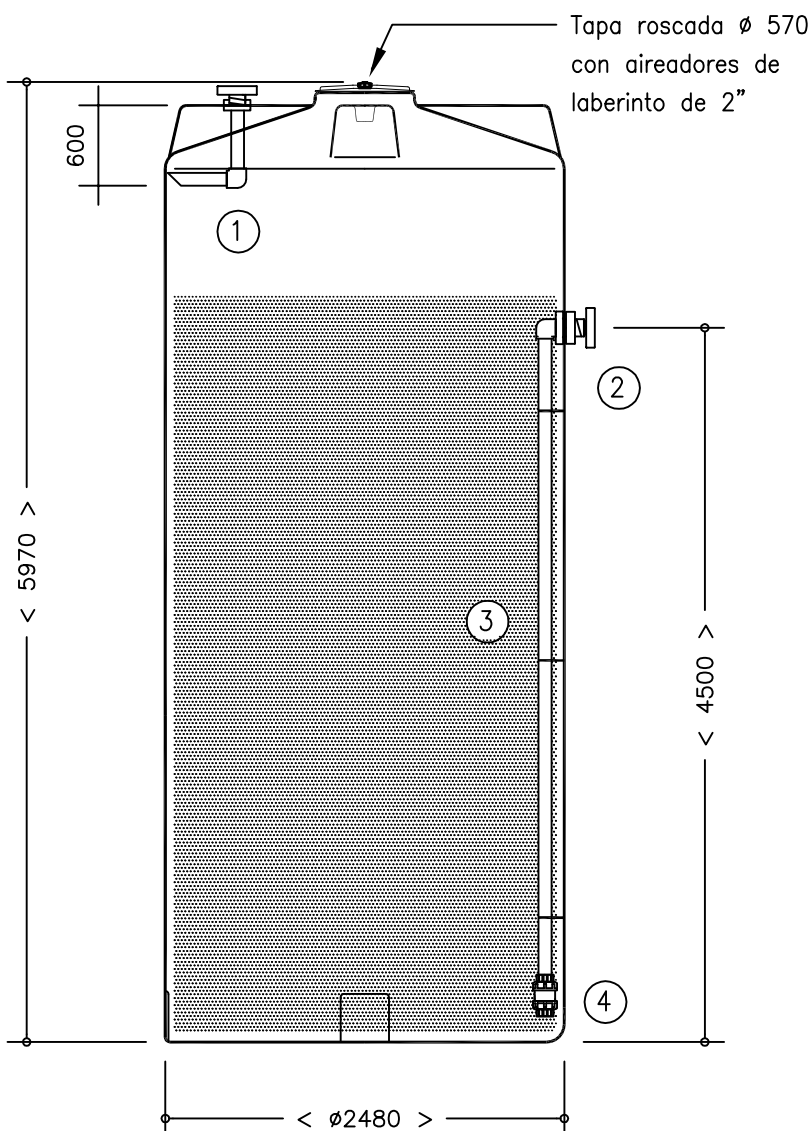

Puesto que el SULFÚRICO es tan pesado y el tanque es tal alto, las presiones en el tercio inferior del tanque son notables. De modo que en vez de la salida habitual por rãcord (pasamuros) en el lateral inferior, puede optarse por hacerla en el tercio superior (2) del tanque, mediante tubo-sonda para aspirar (3), provisto de válvula anti-retorno (4).

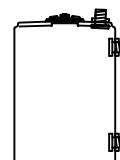

El precio de esta opción, paso 2", terminal brida DN50, es de ...

La carga contra-pared (1) es una opción para paliar la caída de 6 metros al principio y sucesivamente. Otras opciones pueden verse en la hoja de accesorios/complementos para llenado y vaciado.
